

Analysis of Northern Eurasia's Terrestrial Biota.

The overall objective is to get a better understanding of the cycling of the terrestrial non-CO₂ gases in order to be able to produce solid Full Terrestrial Biota GHG budget (FGGB) and the concrete objectives are: (1) to develop a sound methodology of the FGGB at the continental/national level taking into account international climate negotiations, (2) to provide the FGGB for selected regions of Northern Eurasia, (3) to estimate uncertainties of the FGGB, and (4) to provide recommendations for policy makers and stakeholders with special emphasis on scientific validity of international conventions and negotiations.
